

- ① Practical Implementation of Stats {Inferential}
- ② KDA & Feature Engineering.
- ③ Interview Stat Question.

t-test

Agos = []

↳ Null hypothesis

$\mu = 30$

↳ Alternate Hypothesis

$\mu \neq 30$

↳ C.I

95%

$\alpha = 0.05$

↳ Decision Boundary

↳ Test Statistic

↳ Conclusion

Worry

t-test python

p-value

$p < 0.05$

① KDA : Exploratory DATA ANALYSIS

Scatter plot

Bim : To understand data

↓	↓	↓	↓
Age	Weight	Height	BMI
↑	↑	↑	↑

OIP feature

↑ predict

① Missing values → Observation

② [Age | Weight | BMI] → Numerical
→ Categorical

Univariate

Numerical

Categorical

⇒ Outliers (Box plot) ⇒ Observations

Distributions

SND $\mu=0, \sigma=1$

① Bernoulli Distribution

↓ ↓ ↓ ↓ ↓ ↓

Events

① Outcomes are binary

Tossing a coin

H or T

$$p = P(H) = 0.5$$

$$q = P(T) = 0.5$$

$$p = 1 - q$$

$$q = 1 - p$$

— — — —

Buy/Not

0 or 1

0 or 1

Yes or No

Spam or Ham

② Binomial distribution

Tossing a coin 5 times
